

A safe dataset. A real workflow.

Mandate | Synthetic demo pack | Corporate actions, properly authorised.

This pack is wholly invented. It contains no Macro client records, anonymised client extracts, real account details or genuine signatures.

Included	Purpose
3 fictional companies / 2 practices	Model client and tenant boundaries.
6 sample PDF documents	Open and review documents during the demo.
Structured JSON fixtures	Seed an isolated development environment.
9 acceptance scenarios	Define expected behaviour, not claim passed tests.

The primary demonstration

Open the approved source record for A+B. Review package v1. Approve the exact document and sandbox recipient. Run the authorised agent action and inspect its real delivery receipt. Then change the document or add C and demonstrate the block.

Prepared now / still to build

Prepared: fictional records, documents, hashes and expected outcomes. Still to build and test: authentication, server-side access rules, approval binding, Terminal 3 integration, sandbox delivery and runtime evidence.

Privacy is not permission to fake evidence

Synthetic business data is appropriate for public demos. Agent identities, execution proofs, approvals and delivery receipts must accurately reflect what actually ran. All proof and receipt arrays start empty.

Board authority record

Demo Company Alpha | Source fixture BR-001 | Version 1

Field	Fictional scenario value
Company reference	co_demo_alpha - not a registration number
Scenario date	7 September 2026
Permitted signatories	Person A (Demo) AND Person B (Demo), jointly
Not authorised by this record	Person C (Demo)
Purpose	Prepare an illustrative banking instruction package for professional review.

Authority represented in the scenario

Assume a professional has reviewed this fictional source record. The scenario permits exactly A and B acting jointly. It does not permit adding C, using a different company, or changing the approval conditions.

Separate release approval required

This source fixture is not approval to send a document. A designated reviewer must approve the exact package version, recipient and action in the running app. An edited package requires a fresh review.

Deliberately non-executable

This is a software test record, not a legal resolution template. It contains no genuine signature, company number, bank account, identity document or certification. Do not submit it to a bank or regulator.

Banking instruction package

Demo Company Alpha | PKG-001 | Version 1

Field	Fictional scenario value
Source authority	BR-001, version 1
Requested signatories	Person A (Demo) + Person B (Demo), jointly
Destination label	Mandate sandbox receiver - primary
Permitted action	Release this test document to the configured sandbox receiver only.
Real account / institution	None. No bank integration or banking action.

Package instruction

Original package for review.

Required review

The reviewer must inspect this exact version. The release decision must bind the company, engagement, source record hash, package hash, action and recipient. Approval of one version does not authorise another.

Demonstration boundary

The destination label is not a live address. No network request has been made by this file. Configure a test-only receiver separately and generate genuine runtime receipts only after an actual test delivery.

Banking instruction package

Demo Company Alpha | PKG-001 | Version 2

Field	Fictional scenario value
Source authority	BR-001, version 1
Requested signatories	Person A (Demo) + Person B (Demo), jointly
Destination label	Mandate sandbox receiver - primary
Permitted action	Release this test document to the configured sandbox receiver only.
Real account / institution	None. No bank integration or banking action.

Package instruction

Changed handling instruction: hold for an additional internal review. This content change invalidates any approval of version 1.

Required review

The reviewer must inspect this exact version. The release decision must bind the company, engagement, source record hash, package hash, action and recipient. Approval of one version does not authorise another.

Demonstration boundary

The destination label is not a live address. No network request has been made by this file. Configure a test-only receiver separately and generate genuine runtime receipts only after an actual test delivery.

Banking instruction package

Demo Company Alpha | PKG-001 | Version 3

Field	Fictional scenario value
Source authority	BR-001, version 1
Requested signatories	Person A (Demo) + Person B (Demo) + Person C (Demo)
Destination label	Mandate sandbox receiver - primary
Permitted action	Release this test document to the configured sandbox receiver only.
Real account / institution	None. No bank integration or banking action.

Package instruction

Negative test: Person C has been added even though the source record only authorises A and B.

Required review

The reviewer must inspect this exact version. The release decision must bind the company, engagement, source record hash, package hash, action and recipient. Approval of one version does not authorise another.

Demonstration boundary

The destination label is not a live address. No network request has been made by this file. Configure a test-only receiver separately and generate genuine runtime receipts only after an actual test delivery.

Management summary

Demo Company Alpha | June-August 2026 | MYR | Synthetic amounts

Metric (MYR)	June	July	August
Revenue	80,000	92,000	105,000
Direct costs	48,000	55,200	63,000
Gross profit	32,000	36,800	42,000
Operating expenses	22,000	23,800	26,000
Illustrative operating profit	10,000	13,000	16,000

What this sample is for

Use as an uploaded accounting document in the client workspace. Its purpose is to test company and period tagging, document review and recipient permissions. It is not a complete set of financial statements.

Provenance and limits

Every number was invented for this demo. This is not an AutoCount export or a representation of its file format. No client records, tax computation, audit opinion or accounting-standard compliance claim is included.

Workflow state

Awaiting accounting review. A secretarial engagement permission must not automatically grant access to accounting documents. This sample is not part of the initial banking-package release.

Tax document checklist

Demo Company Alpha | Illustrative engagement | No statutory deadlines

Requested document / action	Demo state	Owner
Year-end trial balance	Missing	Client finance contact (Demo)
Fixed asset schedule	Requested	Client finance contact (Demo)
Prior-period working papers	Pending staff review	Tax preparer (Demo)
Client approval of completed pack	Not started	Client representative (Demo)

What this sample is for

Illustrate missing-document tracking and handoffs in a separate tax engagement. These are example checklist items, not a complete or legally prescribed list.

Professional judgement stays with the practitioner

No tax rates, liabilities, filing dates or submission authority are generated. A qualified practitioner must determine real requirements outside this fictional demonstration.

Scope boundary

This file supports future workspace testing. The first end-to-end demo remains the approved banking-package release. No tax submission, client email or external filing has occurred.
